

Notice Boards

This Group Chat like feature allows staff to communicate effectively with different users on the app

Written by Sanket Haval | Last published at: September 20, 2024

Notice Boards is a great feature to communicate with Students, Parents/Guardians & Staff.

As a staff member, you decide on a group-by-group basis who will have access to write into the Notice Board, so it can work as either a Chat or an Announcement system. This works particularly well for Sports Teams, Trips and even year/class groups.

Note: Only staff members can create groups, so you will never be added by a student or a parent to a group. When Limited Access users create a Notice Board, they still need approval from Full Access users in order to publish it. Once published, they can start sending messages into the Notice Board.

To Create a Notice Board:

1. Go to your **Dashboard**
 2. Click on **Notice Boards** on the left side menu
 3. Click on **Add** to create a new board
 4. Enter the **Name** of the Notice Board (*e.g Italy Trip or TY Group etc.*)
 5. **Filter by** - either an existing **Group**, or use the **Students** option
 - **Select** the **Years / Class** you would like to add to your **Notice Board**
 - Click on **Apply Filter** to load the selected list
 - **Select** Students/Parents/Guardians **individually** or **all**
 - After selecting the students/parents click **Add Selected** so they move to the Final List
 6. **Add Teachers** to the Notice Board (*Add the teacher(s) who is organising and leading the trip or event*)
 - **Change** the **Filter by** to **Teachers**
 - Click on **Apply Filter** to load the selected list
 - **Select** all Staff Members you would like to have in your Notice Board
 - Click on **Add Selected**
 7. **Review Final List** - To ensure the correct students, parents/guardians and teachers are added
 8. Click on **Submit**
-

Allowing Users to Reply:

1. Click on the **Can User Reply** icon on the very right hand side column

By default, no users have access to respond in the Notice Board

2. This opens a pop-up window that shows the names of everyone added to your Notice Board. *(This will only show App Users)*

3. You can either **Allow All** or **Select** who you wish to give access to respond and then select **Allow**
