

Delivery & Read Status on a Personal Notification

Track Exactly Who Received and Read Your Message

Written by Sam Support | Last published at: February 17, 2026

Personal Notifications allow you to see:

- Who has read the message
- Who has not read the message
- Whether the Push Notification was successfully delivered
- Whether the user is registered on the app

This insight is extremely valuable when trying to ensure parents are receiving important communications.

If parent is registered and a message is **not delivered and remains unread**, it usually means:

- Notifications are turned off
- They changed phones and did not reinstall the app

The unread email reminder option when creating a Personal Notification is great for these situations so it is recommended to use every so often.

You can also see whether a parent has registered on the app, giving you further context before following up.

How to View Delivery & Read Status

1. Access Personal Notifications

- Go to uniqueschoolapp.ie and login
- Click **Personal Notifications**
- Select **Manage Personal Notifications**

By default, you will see the Personal Notifications you have previously sent.

2. Check Read / Unread Status

In the main list, you will see:

- A **Read** column
- An **Unread** column

Click on either number to open a detailed report of recipients.

Understanding the Detailed Report

The report provides the following information:

Student Name & Read Status

- Usually marked as **Unread**
 - Only applies if “Include Student in PN” was enabled when sending
-

Primary Contact

- Displays the Primary Contact name (or staff member if sent to staff)
 - Shows whether they have read the message
-

Secondary Contact

- Displays the Secondary Contact name
 - Shows their read status
-

Push Notification Delivery Status

Beside each contact you will see one of the following:

 Warning Symbol

- Push Notification was **not delivered**
- Hover over the icon for more details

 Check Symbol

- Push Notification was **successfully delivered**
 - Click the report icon to view the exact delivery time and devices
-

App Registration Status

You will also see an indicator beside each name:

 Green Box

- User is registered on the app

 Red Box

- User is not registered on the app
-

Why This Is Important

This feature helps you:

- Identify parents who may not have the app installed
 - Confirm whether a message was successfully delivered
 - Avoid unnecessary follow-up emails
 - Maintain clear, trackable communication
 - It ensures you are not guessing whether communication has reached home.
