

One touch posting to Social Media Platforms directly from App Notifications/News feeds

It is no longer necessary to access multiple platforms to publish your content to. The App allows you to, with one click, send notifications and update your news feed whilst also publishing these notices to Twitter and Facebook, without having to login to your social media to do so.

Posting to Twitter and Facebook can be done from the CMS and through the Communicators App.

- Using **Auto-posting** you can set up **instantly** publish to both Twitter and Facebook or either.

Publish to Social Media

1. Create your notification or news item as normal adding the message, images and re-direct as required.
2. At the bottom of the notification or news page select the **Twitter** and **Facebook** checkboxes as needed
3. If **Twitter** is chosen, click on either the **Copy Title** or **Copy Message** button
4. The title or message of the notification/news item will be pasted into the Twitter Post text box
 - As Twitter limit characters only the **first 280 characters** from your post will appear and may need to be **edited** at this point before sharing.
5. Click **Send**
6. The Notification or News item will appear in the Notification / News feed in the App, relevant users will be alerted to the Notification
7. The post will appear on Facebook (if selected) and in the Twitter feed (if selected).
