As a Year Head, managing student information and accessing the right notes is crucial for effective student support. Understanding how to update and navigate your access permissions can help you stay informed about student progress and communication.

When transitioning between academic years, it's essential to update your Year Head status to ensure you have the correct access to student attendance and parent communication records.

Key Steps for Year Head Access Management

1. Annually review and update your Year Head permissions
2. Verify access to student attendance notes
3. Confirm parent communication note recipient settings

Typically, Year Head roles are dynamically updated to reflect current academic progression. This means a First Year Head will move to become a Second Year Head, ensuring continuous and appropriate access to student information.

Note: Failing to update your Year Head status can result in limited visibility of critical student records.

Troubleshooting Access Issues

If you're experiencing difficulties viewing student notes, consider the following potential solutions:

- Confirm your current Year Head assignment in the system
- Check with your school's administrative team about permission updates
- Verify your user role and associated access levels

Remember that proper access management is key to supporting student welfare and maintaining effective communication channels within the school.
